Defects visible before installation (colour, pattern, shape, dimensions) or caused by installation and visible after installation may not give rise to warranty disputes with the manufacturer!

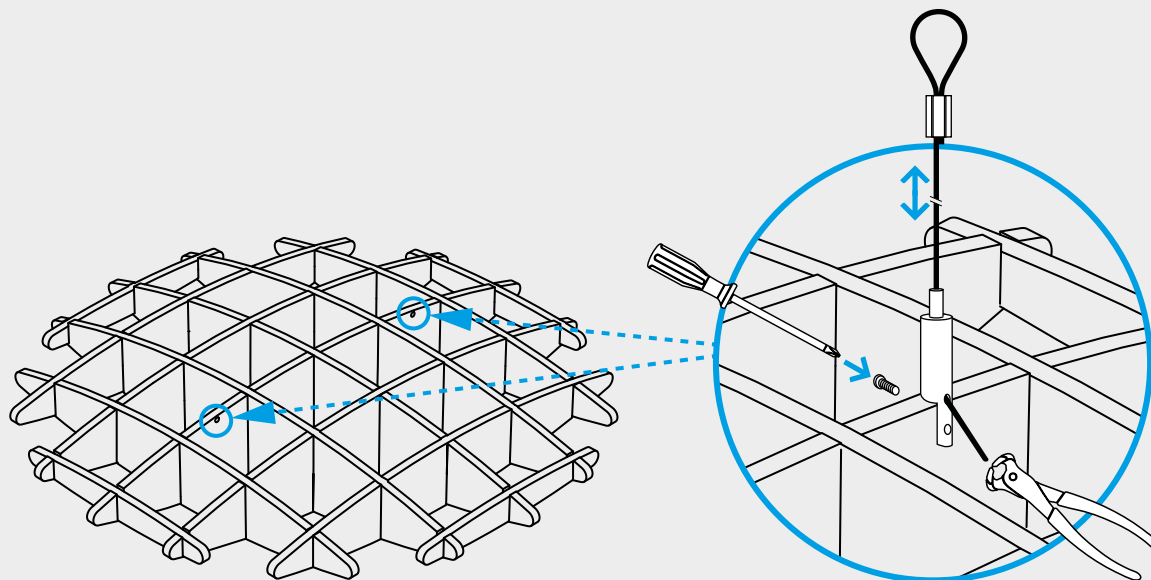

NEXA DECORATIVE PANEL

INSTALLATION OF THE NEXA DECORATIVE PANEL

Screw the included wire rope grippers into the mounting holes of element No. 1. Adjust the length of the wire ropes to your individual needs. Cut off any excess wire rope using wire cutters. Hang the panel in your desired location.

CONDITIONS OF USE OF THE PRODUCTS

For the sake of your health, safety and the long life of products made by Cezar, we have prepared general advice on the installation and use of our products. In particular, remember the following:

- finishing elements (aluminium, brass stainless steel profiles) must be protected from contamination with wet materials (concrete, mortar, adhesive, tile grout, etc.) used in the construction industry, e.g. contaminated elements should be immediately cleaned with clean water,
- patina may be present on the surface of natural brass profiles, which is caused by the natural oxidation processes of brass. The patina can be removed using commonly available brass care products,
- do not use tools that could overheat the material when cutting metal profiles,
- do not use agents containing chlorine or other corrosive substances to clean metal parts,
- use only chemically neutral mounting adhesives and silicones for installation of metal profiles,
- do not use any cleaning materials containing solvents to clean plastic parts,
- any parts with residues of labels, price tags or tapes should be washed off with a cloth soaked in denatured alcohol,
- use a fabric with a high moisture-absorbing capacity to clean the surface.

Remember to make sure that any construction work is carried out by qualified workers who respect building regulations. The manufacturer shall not be held liable for the products which have been used other than for their intended purpose or damaged during improper installation.

 Observe the general EHS rules when carrying out work. This can protect you from injuries and ensure adequate safety and secure installation!

 The colour of the products from different production batches may vary slightly in shade.
